Tran Tuan Thanh

Backend Developer | trantuanthanh2002.st@gmail.com | 0379086874 | GitHub

Backend Developer with hands-on experience in designing and developing scalable RESTful APIs, authentication systems, and database optimization. Strong background in backend architecture, caching, and real-time systems. Experienced in building production-like applications including social platforms and e-commerce systems. Focused on writing clean, maintainable code and improving system performance.

PROFESSIONAL EXPERIENCE

TienPhong CDS **Aug 2024 – Aug 2025**

Junior Backend Developer

- Faced performance bottlenecks in API response times due to inefficient database queries; redesigned database schema and applied indexing with Redis caching, reducing query latency and improving system responsiveness.
- Needed a scalable authentication system for multiple services; implemented JWT-based authentication with role-based access control, enabling secure and stateless API access across modules.
- Improved system throughput and message delivery reliability by implementing queue-based asynchronous processing for background jobs.
- Real-time communication was required for user interactions; integrated Firebase and Ably messaging systems, enabling instant notifications and chat features.
- E-commerce system required reliable transaction handling; implemented order processing flow with payment integration (VNPAY), ensuring consistency and smooth checkout experience.
- Ongoing issues with code maintainability and deployment; improved code structure and set up CI/CD pipelines, reducing manual deployment effort and improving development workflow efficiency.

PROJECT

Social Networking & Job Search System

GitHub: https://github.com/tuanthanh7/tcareer-sv

- Built a backend system combining social networking and job recruitment, enabling users to interact, search jobs, and apply within a single platform.
- Solved real-time notification challenges by integrating Firebase and Ably, ensuring timely updates for messages, job alerts, and user interactions.
- Designed scalable RESTful APIs and optimized database performance to support high user activity and concurrent operations.

E-commerce Platform for Tech Products

GitHub: https://github.com/tuanthanh7/tmart-sv

- Developed a full-featured backend system for e-commerce, handling product management, shopping cart, order processing, and payment integration.
- Addressed discount and promotion complexity by designing a flexible coupon system, improving marketing capabilities and user engagement.
- Ensured data consistency and performance by optimizing database queries and structuring APIs for scalable transaction handling.

CERTIFICATIONS

TOEIC 600 — IIG Vietnam (2024)

EDUCATION

Can Tho University of Technology **Aug 2020 - Dec 2024**

Bachelor of Information Technology

GPA: 3.67 / 4.0

SKILLS

- **Backend Development:** PHP (Laravel, Lumen), Python, Java (Spring Boot), RESTful API, MVC Architecture, OOP
- **Database:** MySQL, JPA (basic), Query Optimization, Database Normalization, Indexing, Redis Cache
- **Tools & Technologies:** Git, CI/CD, Firebase, Ably, Docker (basic)
- **Programming Languages:** PHP, Python, Java
